

A Loft on the Lachine Canal by L. McComber Architects

Posted by Date on January 30th, 2009

L. McComber Architects provided a design solution for the owners of this 700 square foot loft in Montreal, Canada. They needed to create a room for a newborn baby, so a suspended platform bed made of curved douglas fir plywood and tubular steel was created.

Nice job done!
It's good to see people spend money to make better use of smaller spaces, rather than simply go and buy a larger space.

Very tasteful, but the whole thing is so totally impractical it boggles the mind why someone would spend this kind of money on an apartment they will almost certainly have to abandon within a few years at best (assuming they manage to avoid a debilitating injury doing odd jobs that precarious ladder to a dwelling in a hot 3000 am). The article might have been better titled, "The death-blows of Montreal's upper-middle-classes and their disposable income."

Peter Shaw on 30 Jan 2009 at 12:36 pm #
They probably spent the money on this because it added value to the property since it now has more space. It doesn't matter if they have to move out eventually, the additional space has made the apartment worth more money than it was before. It's not a waste of money, it makes money.
